# **Weekly Coal Production**

Production for Week Ended:  
August 8, 1987

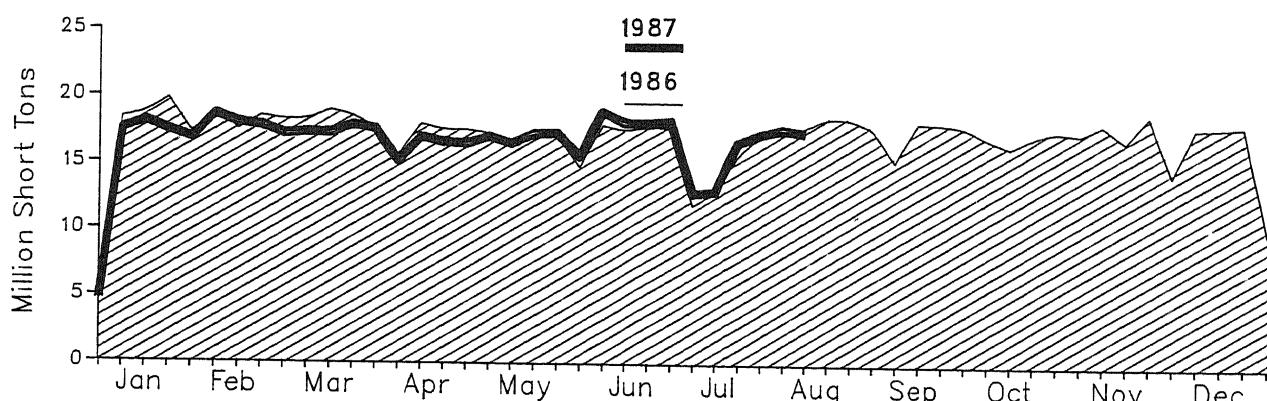

# Highlights

U.S. coal production in the week ended August 8, 1987, as estimated by the Energy Information Administration, totaled 17.3 million short tons (bituminous coal and lignite, nearly 17.3 million short tons; Pennsylvania anthracite, .06 million short tons). This was 1.8 percent lower than in the previous week, and was 2.1 percent lower than production in the corresponding week of 1986.

Cumulative U.S. coal production from January 1 through August 8, 1987, was estimated at 532.4 million short tons, 1.7 percent below the 541.4 million short tons produced in the comparable period in 1986.

The methodology used to make weekly estimates of coal production was published in the Weekly Coal Production (DOE/EIA-0218(86/35)), released for publication on September 8, 1986.
